ANIMATIONS IN CHATGPT

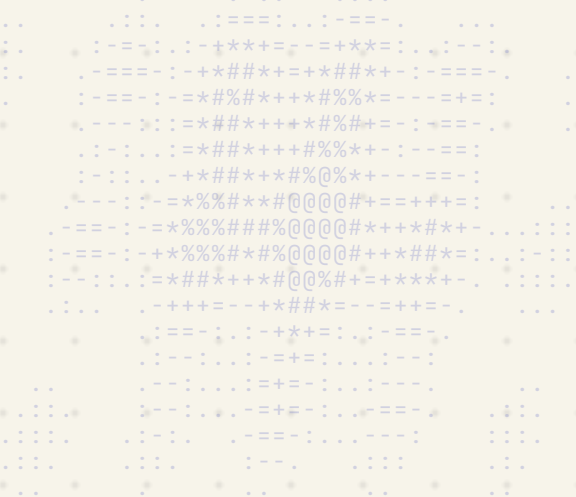

Turn one selfie video into a cartoon, a felt puppet, a 3D film and a painting without leaving ChatGPT. The exact setup, the snap-cut edit, and copy-paste prompts.

▶ START HERE: OPEN HIGGSFIELD IN CHATGPT

This is the setup behind my snap reel: one take, four animation styles, all made inside ChatGPT with the Higgsfield plugin. Tap the button above first. It opens the plugin page, then follow the five steps.

START HERE

One link does the heavy lifting. It takes you straight to the Higgsfield plugin for ChatGPT, where you connect it in two taps.

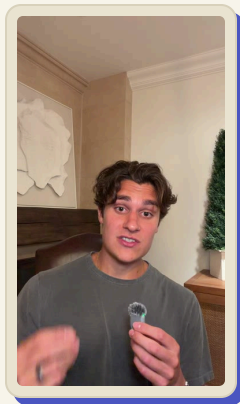

> STEP 0 • THE LINK

higgsfield.ai/s/animations-in-chatgpt-ig-opusjake-lgimGS

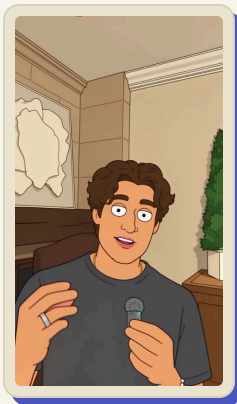

Open it on the device you use ChatGPT on. Then come back here.

// WHAT YOU GET

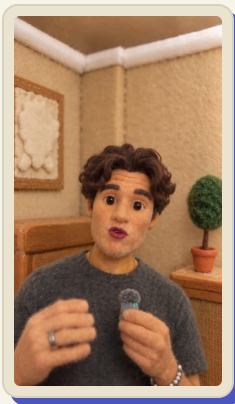

Same clip, same motion, five looks. Every frame below is the same moment of one real take.

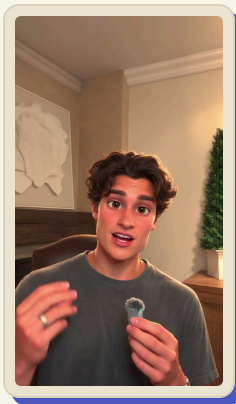

REAL

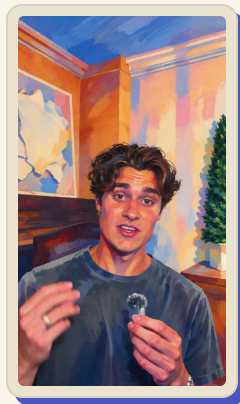

CARTOON

FELT

3D FILM

PAINT

The room changes with you. The hands, the head turns and the lip sync stay locked to the original, which is what makes the cuts work.

THE SETUP

Five steps. About two minutes the first time, ten seconds every time after.

// 01 • CONNECT THE PLUGIN

- Open ChatGPT (the app or chatgpt.com) and go to **Plugins** in the sidebar.
- Search **Higgsfield**, tap **+**, then **Allow** on the sign-in sheet.
- Connected it before? Disconnect and reconnect. That pulls in the Styles update.

// 02 • OPEN THE EXTENSION

- Open **Higgsfield** from your plugins. It runs as a full extension inside ChatGPT.
- Pin it: tap ... next to Higgsfield, then **Pin to sidebar**. Now it is one tap away.

// 03 • OPEN GENJUTSU

- On the extension's **Explore** tab, tap the **Genjutsu** tile.

// 04 • UPLOAD YOUR CLIP

- Upload your own footage. One take, one person, vertical.
- The rules for a clip that animates cleanly are on the next page.

// 05 • PICK A STYLE, GENERATE

- Choose a look from **Styles** and hit **Generate**. No prompt needed.
- Repeat with the **same clip** for every style you want. Same clip means same motion, so every version lines up frame for frame.

SHOOT IT RIGHT

Genjutsu keeps your movement and rebuilds everything else. Give it movement worth keeping.

RULE	WHY IT MATTERS
4 to 10 seconds, vertical 9:16	Short takes come back fastest and fit a Reel
One person, facing the camera	The face and lip sync hold best square on
Bright, even light on your face	Shadows read as texture and get styled in
Big gestures: a snap, a point, a turn	These become your cut points
Hands stay in frame on the snap	A snap half off screen cuts badly
Your own footage only	Never run someone else's video through it

// THE ROOM COUNTS

The whole frame gets restyled, not just you. A plant becomes a felt pom-pom, a wall becomes brush strokes. A room with a few clear shapes (art on the wall, a plant, a chair) gives each style something to play with.

THE SNAP CUT

This is the edit that makes people rewatch. You need the original clip plus three or four styles of it.

1. Stack every version on your timeline, all starting at the same frame. Genjutsu keeps the timing, so they line up.
2. Scrub to the exact frame your fingers flick on the first snap. Cut to style one there.
3. Next snap, cut to style two. Next snap, style three.
4. Cut back to the real you on the next line you say.
5. Keep your original audio running under everything.

// THE TIMING I USED

```
00.00 REAL    "ChatGPT just killed Disney"
02.83 CARTOON snap 1
03.47 FELT    snap 2
03.90 3D FILM snap 3
04.24 REAL    "directly inside of ChatGPT"
```

Cut on the flick, not the setup. One frame early looks like a glitch, one frame late looks like a delay.

SAMPLE PROMPTS

Styles needs no prompt. Use these when you want a look the Styles row does not have, or want to drive it from the chat. Upload your clip in the chat, tag Higgsfield, paste.

// 2D CARTOON

@Higgsfield Use Genjutsu on my uploaded clip. Turn the whole video into a flat 2D TV cartoon: thick black outlines, flat cel colors, simple rounded proportions, big expressive eyes. Restyle the room too. Keep my exact framing, every hand movement including the finger snap, and my lip sync.

// FELT STOP-MOTION

@Higgsfield Use Genjutsu on my uploaded clip. Make me a needle-felted wool puppet with fuzzy fibers and bead eyes, and rebuild the room as a handmade miniature felt set. Nothing photographic should remain. Keep my framing, my gestures and my lip sync exactly.

// 3D ANIMATED FILM

@Higgsfield Use Genjutsu on my uploaded clip. Turn it into a frame from a 3D animated feature film: stylized glossy character, slightly bigger eyes, soft cinematic lighting, and a matching stylized CG room. Keep my exact framing, movement and lip sync.

// GOUACHE PAINTING

@Higgsfield Use Genjutsu on my uploaded clip. Repaint the whole video as a bold gouache painting: thick brush strokes, vivid blues, pinks and oranges, graphic shadows. Keep my framing, gestures and lip sync exactly.

// THE 4-PACK

@Higgsfield Make four Genjutsu versions of my uploaded clip: a 2D cartoon, a needle-felt stop-motion puppet, a 3D animated film, and a gouache painting. Same framing and timing in all four so I can cut between them on my finger snaps.

// TWO RULES FOR WRITING YOUR OWN

- Describe the look, not a show or a studio. "Thick black outlines, flat cel colors" beats any brand name.
- Always end with the keep line: framing, every hand movement, lip sync. That sentence is what keeps the result looking like you.

TONIGHT

Shoot one six-second take with a snap in it. Generate three styles from it. Cut on the snaps. Post it.
