ANTHROPIC SKILLS INDEX

All 15 official Anthropic skills in one place – what each one does, when to reach for it, and the direct link to install it. The fastest way to upgrade Claude from chatbot to operator.

```
> boot opusjake_os
> resource: anthropic-official-skills
> version: v1.0 • 2026
> status: ready_
```

Anthropic quietly ships official skills in a public repo – pre-built playbooks that load into Claude and make it execute like a specialist. Most people don't know the repo exists. This index gives you all 15, what they're for, and the exact link to grab each one.

HOW SKILLS WORK

A skill is a folder with a `SKILL.md` file inside – instructions Claude loads when the task matches. No fine-tuning, no API glue. You drop the folder in, and Claude picks the right playbook at the right moment on its own.

- Works in Claude Code, the Claude apps, and the API.
- Skills trigger automatically – you don't invoke them, you just ask for the task.
- The official repo: github.com/anthropics/skills

THE 15 OFFICIAL SKILLS

// DOCUMENTS & FILES

- **docx** – create and edit Word documents: formatting, tracked changes, comments.
- **pptx** – build and modify PowerPoint decks, slide by slide.
- **pdf** – merge, split, fill forms, extract, watermark – anything PDF.
- **doc-coauthoring** – a structured workflow for writing long documents *with* Claude instead of prompting blind.

// DESIGN & VISUAL

- **canvas-design** – polished posters, covers, and visual layouts as image or PDF.
- **frontend-design** – gives Claude real UI taste: layout, hierarchy, spacing that doesn't look AI-generated.
- **algorithmic-art** – generative art sketches: particles, flow fields, pattern systems.
- **theme-factory** – generate cohesive visual themes you can apply across outputs.
- **slack-gif-creator** – animated GIFs sized and optimized for Slack.

// BUILD & SHIP

- **mcp-builder** – build MCP servers that connect Claude to your tools, the right way.
- **web-artifacts-builder** – multi-file interactive web apps as Claude artifacts.
- **claude-api** – an always-current reference so Claude writes correct Claude API code.
- **skill-creator** – the meta-skill: Claude builds *new* skills for your own workflows.

// COMMS & BRAND

- **brand-guidelines** – load your brand system so every output ships on-brand by default.
- **internal-comms** – announcements, status updates, and team comms that sound human.

INSTALL IN 60 SECONDS

```
# Claude Code – drop any skill into your project
git clone https://github.com/anthropics/skills
cp -r skills/skills/<skill-name> .claude/skills/

# Or install for every project on your machine
cp -r skills/skills/<skill-name> ~/.claude/skills/
```

Start with **skill-creator**. It teaches Claude to build custom skills for your exact workflows – the other 14 show you the ceiling.

The play: pick the two skills closest to your daily work, install them, and run one real task through each today. Then build your own with skill-creator.
