

// SECTION 01 • PROMPT PACK

SECRET CODES

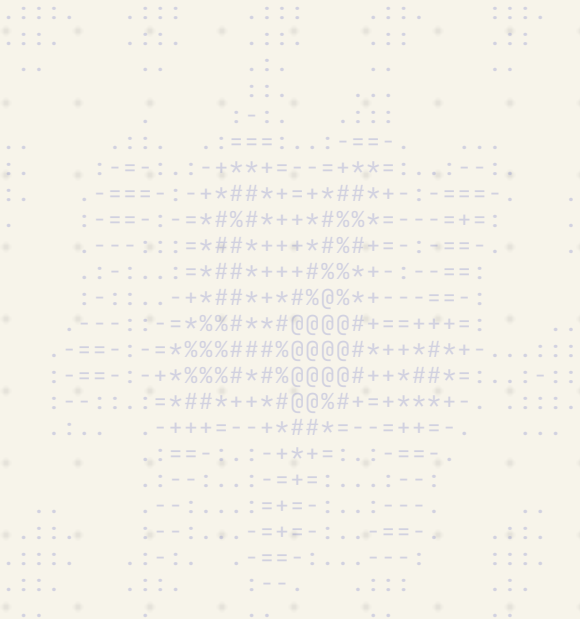

VOL. 1

Ten copy-paste power prompts that make Claude and ChatGPT work like a senior operator. Save it, run them, ship faster.

```
> boot opusjake_os
> resource: secret-codes-vol-1
> version: v1.0 • 2026
> status: ready_
```

This pack is the first volume of OpusJake secret codes — short, surgical prompts that flip an AI chat from intern mode into operator mode. Every code below is copy-paste ready. No fluff, no theory.

HOW TO RUN THESE

Each code is a single message you send **before** your actual request. Think of it as a boot sequence: you load the behavior first, then give the task.

- Paste the code block as-is – don't paraphrase it.
- Stack a maximum of **two** codes per conversation.
- If the model drifts, re-paste the code. It re-anchors instantly.

Codes are model-agnostic: tested on Claude and ChatGPT. Anything marked [CLAUDE] leans on longer context windows.

THE CODES

// CODE 01 • THE OPERATOR

From now on, act as a senior operator, not an assistant.
Before answering: identify the actual goal behind my request,
state it in one line, then deliver the shortest path to it.
No caveats, no options unless I ask. One recommendation, reasons after.

// CODE 02 • THE INTERROGATOR

Before doing anything, ask me the 3 questions whose answers would
most change your output. Then wait. Only after I answer, execute.

// CODE 03 • THE RED TEAM

I'm about to share a plan. Attack it. Find the 3 weakest assumptions,
rank them by how badly they'd hurt me if wrong, and propose the
cheapest test for each. Do not be polite about it.

WHEN TO USE WHAT

SITUATION	CODE
Starting any serious work session	01 • Operator
Vague idea, unclear ask	02 • Interrogator
Before you commit money or time	03 • Red Team

The full 10-code pack ships in Vol. 2 – follow [@opusjake](#) so you don't miss it.
